ORDINANCE FOR MASTER OF TECHNOLOGY (M.TECH) IN ENGINEERING PHYSICS

1. The duration of the course leading to the Degree of Master of Technology (M.Tech) in Engineering Physics shall be two academic years. The maximum period in which a candidate must qualify for the degree shall be four years failing which he/she shall not be allowed to continue his/her studies for the course.
2. An academic year shall be divided into two semesters. The first academic year will consist of 1st and 2nd semester and the second academic year will consist of 3rd and 4th semester. At the end of each semester, there shall be an examination wherein candidates will be examined in the courses prescribed for that semester and the semester examination shall be designed as First Semester Examination. Second Semester Examination, Third Semester Examination & Fourth Semester Examination. The examination shall be held twice in a year in the month of May/June and December/January or on such other dates as maybe fixed by the University.

   A supplementary examination for re-appear paper(s) of the 1st and 2nd semester of M.Tech programme shall be held alongwith their regular 1st and 2nd semester examinations respectively. The candidates having re-appear(s) in 3rd semester will be allowed to appear in a special examination to be conducted by the University alongwith 2nd semester of M.Tech programme.

3. A person with the following eligibility conditions shall be eligible for admission to M.Tech (Engineering Physics) programme:

i) M.Sc.(Physics) or B.E./B.Tech. with atleast 50% marks (45% for SC candidates of Haryana)

ii) First preference will be given to the candidates with GATE/NET/SLET.

4. The Head of the Department concerned shall forward to the Controller of Examinations, at least five weeks before the commencement of the examination in each semester, examination admission forms/list of students who have satisfied the requirement of rules and are qualified to appear in the examination.
5. The last date for the receipt of admission forms and fee with or without late fee, as prescribed by the University shall be notified by the Controller of Examinations.
6. Every candidate shall be examined in the subject (s) as laid down in the Scheme of Examinations/syllabus prescribed by the University from time to time.
7. The medium of instructions and examination shall be English

8. The examination shall be open to any regular student of the programme meeting the following criteria:
   i. of possessing a good character;

ii. of having remained on the rolls of the Department of Physics for the semester preceding the examinations;

iii. of having attended not less than 75% of the full course of lectures delivered in each Paper, Practical, Seminar etc. (the course to be counted up to the last day when, the classes break up for examination, viz, one week before the commencement of examination). Deficiency not more than 15% may be condoned by Head of the Department.

9. If a candidate after attending the course of studies in the Department of Physics did not appear or having appeared failed in one or more papers for any semester examination, the candidate can appear for such paper(s) at subsequent examination(s) without attending a fresh course of studies for that semester in the department. Such a candidate may, in the mean time pursue his studies for the next semester and appear in the examination(s) for the same along with the examination for the lower semester(s).
Provided that a candidate shall complete all the requirements of the Degree in a period not exceeding four years from the date of his joining the course.

10. The supervisor for project work should be allocated to the student in the very beginning of the second semester facilitating the identification of project topic, review of literature etc.
Project report should present an orderly and critical exposition of the existing knowledge of the subject and or embody original investigation carried out by the candidate, in an orderly manner. The candidate should lay down in his report clearly the work done by him as an original investigation and the sources from which he has obtained other information contained in his report. The report should demonstrate that the candidate has been trained in research work and is in a fit condition to take up fruitful research on his own.
A candidate will be required to submit the report upto 30th June of the year. At the time of submission of report a candidate shall produce certificate from his Supervisor and the Head of the Department that he has worked for project for one full semester.
The one external examiner will evaluate project report and viva-voce will be conducted jointly by external examiner and the internal examiner (i.e. supervisor of the student). If the report is found suitable, the candidate shall have a Viva-Voce test by both the examiners on a date notified by the University. A candidate who fails in the report shall be allowed to revise and resubmit it for fresh assessment not earlier than six months and not later than one year from the date of his failure. If the candidate fails in the report even in the second attempt, he shall be deemed to have failed in the whole examination.

11. (a) Theory Paper(s) will be set and evaluated preferably by a single examiner
(b) Examinations in Practical and Viva-Voce to be conducted jointly by the External and Internal Examiners. If an External Examiner is not able to come,

another teacher from the Department or nearly institute may act as External Examiner.

(c) The marks obtained in internal assessment shall be awarded by the teacher(s) concerned and duly countersigned by the Head of the Department and then forwarded to the Controller of Examinations immediately after the semester.

Internal assessment of all the theory subjects, practicals and seminars will be made as per the criteria mentioned below:

- 25% marks for assignments
- 50% marks for test(s)
- 25% marks for attendance

12. Seminar: Each student shall individually prepare and submit a seminar report on a topic of current relevance within stipulated time. A panel consisting of two teachers (internal) should evaluate the seminar report and the presentation.

13. The pass marks for passing any examination shall be:
    a. 40% in each theory and practical examination:
    b. 40% in internal assessment of each paper;
    c. 50% in the aggregate

14. The successful candidates shall be classified as under:-
    i) Candidates obtaining atleast 75% or more marks in aggregate in first attempt in all the four semesters – First Division with Distinction
    ii) Candidates obtaining atleast 60% or more marks in aggregate – First Division
    iii) Candidates obtaining 50% or more marks but less than 60% marks in aggregate – Second Division

15. The amount of examination/project report fee to be paid by a candidate for each Semester Examination shall be prescribed by the University from time to time.

M.D.University, Rohtak

M.Tech. (Engineering Physics)
Scheme of Examination

Semester-I

S. No.	Paper Code	Nomenclature of Paper	Marks	Internal Assessment	Total Marks	Periods / Week
1.	MTEP-101	Mathematical Physics-I	80	20	100	3
2.	MTEP-102	Optimization Methods	80	20	100	3
3.	MTEP-103	Computational Physics-I	80	20	100	3
4.	MTEP-104	Statistical Physics	80	20	100	3
5.	MTEP-105	Concepts of OOP using C++	80	20	100	3
6.	MTEP-106	Minor Project-I	200	--	200	--
7.	MTEP-107	Lab-I	200	--	200	12
8.	MTEP-108	Lab-OOP	100	--	100	4
				Total Marks	1000	

Semester-II

S. No.	Paper Code	Nomenclature of Paper	Marks	Internal Assessment	Total Marks	Periods / Week
1.	MTEP-201	The physics of information technology	80	20	100	3
2.	MTEP-202	Advance Statistical Physics	80	20	100	3
3.	MTEP-203	Advanced Computational Physics	80	20	100	3
4.	MTEP-204	Alternate Energy Technologies	80	20	100	3
5.	MTEP-205	Concepts of DBMS	80	20	100	3
6.	MTEP-206	Minor Project - II	200	--	200	--
7.	MTEP-207	Lab-II	200	--	200	12
8.	MTEP-208	Lab-DBMS	100	--	100	4
				Total Marks	1000	

Semester-III

S. No.	Paper Code	Nomenclature of Paper	Marks	Internal Assessment	Total Marks	Periods / Week
1.	MTEP-301	Embedded Systems	80	20	100	3
2.	MTEP-302	Photovoltaic systems Engineering	80	20	100	3
3.	MTEP-303	Nano-Science & Engineering	80	20	100	3
4.	MTEP-304	Computer Architecture	80	20	100	3
5.	MTEP-305	Project Management Systems	100	--	100	2
6.	MTEP-306	Lab-III (Simulation, Parallel & Grid Computing)	100	--	100	12
7.	MTEP-307	Training Report	100	--	100	2
Elective-I			80	20	100	3
8.	MTEP-308	Introduction to Quantum Information and Computation				
9.	MTEP-309	Photonics				
10.	MTEP-310	Ion Beam Technology				
11.	MTEP-311	Computational Biology				
Elective-II **			80 100	20 --	100 100	3 4
12.	MTEP-312	Coding Theory				
13.	MTEP-313	Coding Theory Lab				
14.	MTEP-314	SE/OOSE				
15.	MTEP-315	SE/OOSE Lab				
16.	MTEP-316	Multimedia & Visualization Techno.				
17.	MTEP-317	Multimedia & Visualization Techno. Lab				
18.	MTEP-318	Computers Networks				
19.	MTEP-319	Computers Networks Lab				
				Total Marks	1000	

**** Elective –II is of 200 marks: 100 marks for theory paper and 100 marks for one lab work.**

Semester-IV

S.No.	Paper Code	Nomenclature of Paper	Marks	Internal Assessment	Total Marks	Periods / Week
1.	MTEP-401	Project Work (on Site)	600	--	600	--
2.	MTEP-402	Comprehensive Viva-Voce and Seminar	200 +200	--	400	3
				Total Marks	1000	

1. For the award of degree, a student shall be required to earn a minimum of 50% marks.
2. MTEP-106 (Minor Project-I) and MTEP 206 (Minor Project-II) shall be a self study in nature. Internal evaluation will be on the basis of presentation by the student before the entire physics faculty (teaching M.Tech. courses). The end semester evaluation shall be on the basis of comprehensive viva voce and project report before a committee comprising of entire physics faculty (teaching M.Tech. courses) and an external examiner approved by BOS.
3. The student shall undergo summer training after second semester for a duration of six weeks and that will constitute MTEP – 306 course. After completion of training the student shall submit a report and give a seminar before the entire physics faculty (teaching M.Tech. courses).
4. Internal coordinators will be decided by BOS for the students to take care of the summer training, minor and major projects.
5. Each student shall opt for two electives one each from Elective-I and Elective -II.
6. The elective courses to be offered shall be decided and students informed thereof, before the start of third semester keeping in view the availability of the expert in the field and subject to at least five students opting to it.
7. List of experiments in the lab papers shall be upgraded regularly.

SYLLABUS

MATHEMATICAL PHYSICS-I

Course Code: MTEP-601 **Max. Marks : 80**
Periods/ week: 3
Time: 3 hours

Note: The examiner will set nine questions in all by selecting one question from each unit. Question No. I will be compulsory and will have five to seven short questions covering whole of the syllabus. The student has to answer five questions in all by selecting one question from each unit.

Unit – I :Differential Equations: ODE, PDE, Boundary value problems in physics, eigen value, eigen functions, Sturm-Lioville problem.

Unit – II : Special functions: Hermite, Legendre, Laguerre, Bessel functiona 1st 2nd kind, Differential equation and generating function, recurrence relation, Gamma and Beta functions.

Unit –III :Transforms: Fourier, Laplace, Convolution therorem, Parseval's relations, Transfer function (Theta function), Dirac-Delta function.

Unit-IV : Programming in MATLAB: Simple Basics, Programme designing 2-D & 3-D plotting and simple applications.

OPTIMIZATION METHODS

Course Code: MTEP 102 **Max. Marks : 80**
Periods/ week: 3
Time: 3 hours

Note: The examiner will set nine questions in all by selecting one question from each unit. Question No. I will be compulsory and will have five to seven short questions covering whole of the syllabus. The student has to answer five questions in all by selecting one question from each unit.

Unit - I

Mathematical Modeling and the Operation Research Approach, Introduction to Formulation and Classification of Optimization Models, Search-Based Optimization, Algorithms, Formulation and Classification of Linear Programs.

Unit - II

Simplex Algorithms for Solving Linear Programs, Interior Point Algorithms for solving Linear Programs, Duality and Sensitivity in Linear Programming, Goal Programming, Shortest Path in CPM, Formulation and Structure Of Network Flow Models, Formulation and Classification of Discrete Optimization Models, Methods for Solving Discrete Optimization Models.

Unit - III

Nature and Diversity of Nonlinear Programs, Improving Search Paradigm for Nonlinear Optimization, Formulation of Unconstrained Nonlinear Programs One-Dimensional Search, Conditions for Local Optimality, Convex and Concave Functions.

Unit - IV

Gradient Search and Newton's Method, Quasi-Newton Methods for Unconstrained Optimization, Unconstrained Optimization without Derivatives, Formulation and Classification of Constrained Nonlinear Programs, Lagrange Multiplier Methods.

COMPUTATIONAL PHYSICS-I

Course Code: MTEP-103 **Max. Marks : 80**
Periods/ week: 3
Time: 3 hours

Note: The examiner will set nine questions in all by selecting one question from each unit. Question No. I will be compulsory and will have five to seven short questions covering whole of the syllabus. The student has to answer five questions in all by selecting one question from each unit.

Unit-1: Random numbers, quality of test for Randomness of the number, random number generators, simple applications.

Unit-2: Perturbation Theory: Time dependent and time independent; Variational method, WKB Approximations.

Unit-3: Computer simulations of Linear systems.

Unit-4: Computer Simulations of Non-Linear Systems: Introduction to Chaos and Fractals.

STATISTICAL PHYSICS

Course Code: MTEP-104 **Max. Marks : 80**
Periods/ week: 3
Time: 3 hours

Note: The examiner will set nine questions in all by selecting one question from each unit. Question No. I will be compulsory and will have five to seven short questions covering whole of the syllabus. The student has to answer five questions in all by selecting one question from each unit.

Unit – I

Random Variables: Fundamentals of probability theory and Statistics, Entropy, Computation with Random Variables.

Unit – II

Random Variables of Space States: Classical Statistical Mechanics, Introduction to Ensembles, Micro-canonical,macro-canonical and Grand canonical ensembles, Equipartition theorem, Approximate methods

Unit – III

Time dependent Random Variables: Classical Stochastic process, Markov process, Master equation, Simulation of Stochastic processes and fields.

Unit – IV

Quantum Random Systems: Ideal Fermi and Bose gases, Simple applications.

CONCEPTS OF OBJECT ORIENTED PROGRAMMING USING C++

Course Code: MTEP-105 **Max. Marks : 80**
Periods/ week: 3
Time: 3 hours

Note: The examiner will set nine questions in all by selecting one question from each unit. Question No. I will be compulsory and will have five to seven short questions covering whole of the syllabus. The student has to answer five questions in all by selecting one question from each unit.

Objects, relating to other paradigms (functional, data decomposition), basic terms and ideas (abstraction, encapsulation, inheritance, polymorphism).

Unit - I
Overview of C.

Unit - II
Encapsulation, information hiding, abstract data types, object & classes: attributes, methods. C++ class declaration, state identity and behavior of an object, constructors and destructors, instantiation of objects, default parameter value, object types, C++ garbage collection, dynamic memory allocation, metaclass.

Unit - III

Inheritance, Class hierarchy, derivation – public, private & protected, aggregation, omposition vs classification hierarchies, polymorphism, operator overloading, parametric polymorphism.

Unit - IV
Generic function – template function, function name overloading, overriding inheritance methods, run time polymorphism.

LAB – OOP

Course Code: MTEP-108 **Max. Marks : 100**
Periods/ week: 4
Time: 4 hours

Concepts of Object Oriented Programming Using C++ programming language.

LAB – I

Course Code: MTEP-107 **Max. Marks : 200**
Periods/ week: 12
Time: 4 hours

List of Experiments:
- Y ray spectroscopy
- ESR
- Electronics set up
- Nuclear lab
- Microprocessor
- Optical fibre
- LASER
- designing of electronic kit
- Op Amp
- Simulations like: Brownian Motion, Random Number generation

Note: List of experiments will be regularly upgraded.

THE PHYSICS OF INFORMATION TECHNOLOGY

Course Code: MTEP-201 **Max. Marks : 80**
Periods/ week: 3
Time: 3 hours

Note: The examiner will set nine questions in all by selecting one question from each unit. Question No. I will be compulsory and will have five to seven short questions covering whole of the syllabus. The student has to answer five questions in all by selecting one question from each unit.

Unit – I

Introduction: History of computers, Information systems, Noise in physical system, Random Variables, Probability distributions, Noise mechanism, Information in physical systems ,Channel capacity, Gaussian Channel, Fisher Information, Information in Thermodynamics .

Unit -II

The physics of Lasers and Optical Fibres, fourier series, fourier transform, Bandwidth, Modes, fibre optics communication.

Unit – III

Magnetic storage –Diamagnetism, Paramagnetism, Ferro, Antiferro & Ferrimagnetism, Magnetic recording and recording systems, Giant Magnetoresistance(special topic).

Unit – IV

Future Information technologies- (Term paper topics) (i) Quantum information & computation (ii) Optical computing (iii) DNA computing (iv) Nano technology & The future of computing.

ADVANCED STATISTICAL PHYSICS

Course Code: MTEP-202 **Max. Marks : 80**
Periods/ week: 3
Time: 3 hours

Note: The examiner will set nine questions in all by selecting one question from each unit. Question No. I will be compulsory and will have five to seven short questions covering whole of the syllabus. The student has to answer five questions in all by selecting one question from each unit.

Unit – I Semiconductor Statistics:
Statistical equilibrium of free electrons in semiconductors, impurity semiconductors, degenerate semiconductors, electrostatic properties of p-n junctions and metal-semiconductor junctions.

Unit -II Transport in Bulk:
Boltzmann transport equation, Particle diffusion, electrical and thermal conductivity, isothermal Hall effect, Non-equilibrium semiconductors, Quantum Hall Effect.

Unit – III Transport in Nanostructers:
Quantum and classical regimes of electron transport, important quantities in mesoscopic transport, Landauer formula, double barrier resonant tunneling structures: coherent and sequential tunneling, negative differential resistance, single electron transfer, coulomb blockade

Unit – IV Coperative Phenamena: Ising Model
Phase transitions of the second kind, ising model, Bragg-Williams Approximation, One- Dimensional Ising Model, Lattice gas, binary mixture alloy

ADVANCED COMPUTATIONAL PHYSICS

Course Code: MTEP-203 **Max. Marks : 80**
Periods/ week: 3
Time: 3 hours

Note: The examiner will set nine questions in all by selecting one question from each unit. Question No. I will be compulsory and will have five to seven short questions covering whole of the syllabus. The student has to answer five questions in all by selecting one question from each unit.

Unit-I

Errors in computation, Review of Taylor Series, Mean Value Theorem, Representation of numbers (integers and floating point), Loss of significance in computation. Linear Simplex Method, numerical solutions of linear systems, dual-simplex method, Linear Programming.

Unit-II

Random number generation, Test for quality, random sampling techniques; interior point method.

Unit-III

Monte Carlo methods and simulation: Numerical Integration, Boundary Value Problems, Simulation of radioactive decay, Neutron transport and Percolation, Random Walk, Ising Model.

ALTERNATE ENERGY TECHNOLOGIES

Course Code: MTEP-204 **Max. Marks : 80**
Periods/ week: 3
Time: 3 hours

Note: The examiner will set nine questions in all by selecting one question from each unit. Question No. I will be compulsory and will have five to seven short questions covering whole of the syllabus. The student has to answer five questions in all by selecting one question from each unit.

UNIT I: Energy scenario current, energy future, energy sources, environmental effects of energy sources, cheap energy versus environment, why renewable energy, solar day, equation of time, local and solar time, sun earth angles, shadow angles, sunrise and sunset.

UNIT II: Solar radiation, Thermal radiation fundamentals, Solar radiation and electromagnetic spectrum, solar radiation entering the earth system, Solar radiation using satellite, Instruments for measuring solar radiation: Pyranometer, Pyrheliometer, Sunshine recorder, Solar radiation on horizontal and inclined surface, Liu and Jordan Formula, Daily and monthly solar radiation, simulations to calculate sun earth angles and hourly solar radiation on tilted surface.

UNIT III: Photovoltaic (PV) cell technologies, solar pv power systems: semiconductors, p-n junction under equilibrium and biasing, equation, pv cell, modules and array, open circuit voltage and short circuit current, I-V and P-V curves, Array design, peak power point operation, pv system example, Design for remote photovoltaic Application, environmental effects of PV system, cost considerations.

UNIT IV: Nuclear Energy Engineering: Fundamentals of nuclear energy and radiation; introduction to the nuclear processes occurring in a reactor; basics concepts of nuclear reactors and power systems. Reactor Technology: The analysis & design of nuclear assemblies with emphasis on design; nuclear reactor kinetics, stability and control; Breeder reactors; Safety & environmental Norms.

CONCEPTS OF DATA BASE MANAGEMENT SYSTEMS

Course Code: MTEP-205 **Max. Marks : 80**
Periods/ week: 3
Time: 3 hours

Note: The examiner will set nine questions in all by selecting one question from each unit. Question No. I will be compulsory and will have five to seven short questions covering whole of the syllabus. The student has to answer five questions in all by selecting one question from each unit.

Unit - I

Basic concepts: database & database users, characteristics of the database, database systems, concepts and architecture, date models, schemas & instances, DBMS architecture & data independence, database languages & interfaces, data modelling using the entity-relationship approach. Overview of hierarchical, Network & Relational Data Base Management Systems.

Unit - II

Relational model, languages & systems: relational data model & relational algebra: relational model concepts, relational model constraints, relational algebra, SQL- a relational database language: date definition in SQL, view and queries in SQL, specifying constraints and indexes in sql, a relational database management systems, DB2.

Unit - III

DB2 Architecture, Logical Data Structures Physical Data Structure, Instances, Table Spaces, Types of Tablespaces, Internal Memory Structure, Background Processes, Data Types, Roles & Privileges, Stored Procedures, User Defined Functions, Cursors, Error Handling, Triggers.

Relational data base design: function dependencies & normalization for relational dataases: functional dependencies, normal forms based on primary keys, (1NF, 2NF, 3NF & BCNF), lossless join and dependency preserving decomposition.

Unit - IV

Concurrency control & recovery techniques: concurrency control techniques, locking techniques, time stamp ordering, granularity of data items, recovery techniques: recovery concepts, database backup and recovery from catastrophic failures. Concepts of object oriented database management systems, Distributed Data Base ManagementSystems.

References

LAB – II

Course Code: MTEP-207 **Max. Marks : 200**
Periods/ week: 12
Time: 4 hours

Simple Experiments in MatLab and Mathematica environments with emphasis on parallel programming algorithms.
List of Experiments:
- Y ray spectroscopy
- Electronics kit designing
- Microprocessor
- Optical fibre
- Study of PV module
- Stand alone PV system

Note: List of experiments will be regularly upgraded.

DATA BASE MANAGEMENT SYSTEMS LAB.

Course Code: MTEP- 208 **Max. Marks : 100**
Periods/ week: 4
Time: 4 hours

Database Management System: SQL Plus Query Language.

EMBEDDED SYSTEMS

Course Code: MTEP – 301 **Max. Marks : 80**
Periods/ week: 3
Time: 3 hours

Note: The examiner will set nine questions in all by selecting one question from each unit. Question No. I will be compulsory and will have five to seven short questions covering whole of the syllabus. The student has to answer five questions in all by selecting one question from each unit.

Unit - I

Introduction to an embedded systems design: Introduction to Embedded system, Embedded System Project Management, ESD and Co-design issues in System development Process, Design cycle in the development phase for an embedded system, Use of target system or its emulator and In-circuit emulator, Use of software tools for development of an ES.

Unit - II

Processes and Operating Systems: The Processes abstraction, Switching contexts between programs, Real-time operating systems, Intercrosses communication, Performance analysis and power consumption.

Unit - III

Microcontroller: Role of processor selection in Embedded System (Microprocessor V/s Micro-controller), 8051 Microcontroller: Architecture, basic assembly language programming concepts, Instruction set, Addressing Modes, Logical Operation, Arithmetic Operations, Subroutine, Interrupt handling, Timing subroutines, Serial data transmission, Serial data communication.

Unit IV

Networks for Embedded Systems: The I_2C Bus, The CAN bus, SHARC link Ports, Ethernet, Myrinet, Internet, Introduction to Bluetooth: Specification, Core Protocol, Cable replacement protocol.

IEEE 1149.1 (JTAG) Testability: Boundary Scan Architecture.

PHOTOVOLTAIC SYSTEMS ENGINEERING

Course Code: MTEP – 302 **Max. Marks : 80**
Periods/ week: 3
Time: 3 hours

Note: The examiner will set nine questions in all by selecting one question from each unit. Question No. I will be compulsory and will have five to seven short questions covering whole of the syllabus. The student has to answer five questions in all by selecting one question from each unit.

Unit – I : Physics of solar cells: Review of semiconductor properties, dynamics of electrons and holes, densities of electrons and holes, location of Fermi level in doped semicnductors, carrier Transport, Interaction of light with semiconductor, Absorption of light in direct and Indirect Band gap Semiconductor, various recombination processes, electrosttics of p-n junctions, junction capacitance, carrier injection, minority carriers in Quasi Neutral Regions under dark and illuminated conditions, saturation current density, light generated current, solar cell output parameters: Isc, Voc, FF, Efficiency, Efficiency limit, Effect of Temperature.

Unit – II : Introduction to PV Systems:
PV cell, module, Array, Energy storage, study of associated system electronic components in brief like charge controller, battery, inverter, wiring, stand etc.

Unit – III: PV System examples: Designing, modeling and simulation Stand alone Systems, hybrid systems, utility interactive system, designing of PV system: components, load evaluation system design, Example of PV remote cabin.

Unit – IV : Present and future scope in SPV:
Status of SPV in industry and research labs in India and abroad, Manufacturing processes in brief like CZ, floatzone, MBE, EFG etc., emerging technologies –Organic Solar cells, Bilayer and bulk heterojunction organic solar cell, dye sensitized solar cells, Quantum dot sensitized solar cells, CNT based solar cells etc.

NANO SCIENCE AND ENGINEERING

Course Code: MTEP – 303 **Max. Marks : 80**
Periods/ week: 3
Time: 3 hours

Note: The examiner will set nine questions in all by selecting one question from each unit. Question No. I will be compulsory and will have five to seven short questions covering whole of the syllabus. The student has to answer five questions in all by selecting one question from each unit.

UNIT-I: Introduction and scope of nano science and technology
Properties of Nano particles: Optical properties, Magnetic properties, Heat Capacity etc.

UNIT-II: Synthesis and fabrication of nano particles: Ball milling, thermal evaporation, Chemical vapor deposition, biological method.

UNIT-III: Characterization of Nano particles: X ray diffraction, SEM, TEM, EDX Analysis

UNIT-IV: Nano Device and Modelling

COMPUTER ARCHITECTURE

Course Code: MTEP – 304 **Max. Marks : 80**
Periods/ week: 3
Time: 3 hours

Note: The examiner will set nine questions in all by selecting one question from each unit. Question No. I will be compulsory and will have five to seven short questions covering whole of the syllabus. The student has to answer five questions in all by selecting one question from each unit.

Unit - I
Digital Logic Circuits: Logic gates, Boolean algebra, K-maps, Combinational circuits, flip-flops, Sequential Circuits

Digital components: Integrated Circuits, multiplexers, encoders, demultiplexers, decoders, shift registers, binary counters, and memory units.

Unit - II
Data Representation: Data types, complements, fixed point representation, floating point representation , other binary code , error detection codes.

Register transfer and Microoperation: Register Transfer language, register transfer, bus and memory transfer, arithmetic microoperations, logic microoperations, shift microoperations

Unit - III
Basic Computer Organization and Design: Instruction codes, computer registers, computer instructions, timing and control, instruction cycle, memory Reference instructions input output and interrupts, design of basic computer, design of accumulator logic

Central Processing Unit: Introduction, general registers organization, stack organization, instruction formats, and addressing modes.

Unit IV
Computer Arithmetic: Introduction, addition, subtraction, multiplication and division algorithms, floating point arithmetic operation, decimal arithmetic unit, decimal arithmetic operations

Text Book: Mano ,M "Computer System and Architecture", PHI, 2000.

PROJECT MANAGEMENT SYSTEMS

Course Code: MTEP – 305 **Max. Marks : 80**
Periods/ week: 3
Time: 3 hours

Note: The examiner will set nine questions in all by selecting one question from each unit. Question No. I will be compulsory and will have five to seven short questions covering whole of the syllabus. The student has to answer five questions in all by selecting one question from each unit.

Unit - I

Introduction : Project management overview; Forms of project organisation; Project planning; Project control.

Project Identification and Presentation : Socio-economic consideration in project formulation; Social infrastructure projects for sustainable development; Investment opportunities; Project screening and presentation of projects for decision making; Expansion of capacity; Diversification.

Unit - II

Market and Technical Analysis : Market and demand analysis – Market survey, Demand forecasting, Uncertainties in demand forecasting; Technical Analysis – Product mix, Plant capacity, Materials and inputs, Machinery and equipment.

Project Costing and Finance : Cost of project; Cost of production; Break even analysis; Means of financing project; Tax aspects in project finance; Role of financial institution in project finance.

Unit - III

Project Appraisal : Time value of money; Project appraisal techniques – Payback period, Accounting rate of return, Net present value, Internal rate of return, Benefit cost ratio; Social cost benefit analysis; Effective rate of protection.

Risk Analysis: Measures of risk; Sensitivity analysis; Simulation analysis; Decision tree analysis.

Unit IV

Project Scheduling/Network Techniques in Project Management : CPM and PERT analysis; Float times; Crashing of activities; Contraction of network for cost optimization, updating; Cost analysis of resources allocation.

Multiple Projects : Project dependence; Capital rationing; Ranking methods of projects; Mathematical programming approach; Linear programming model; Post Project Evaluation.

Lab-III

Course Code: MTEP – 306 **Max. Marks : 200**
Periods/ week: 12
Time: 4 hours

Simulation, Parallel & Grid Computing

INTRODUCTION TO QUANTUM INFORMATION AND COMPUTATION

Course Code: MTEP – 308 **Max. Marks : 80**
Periods/ week: 3
Time: 3 hours

Note: The examiner will set nine questions in all by selecting one question from each unit. Question No. I will be compulsory and will have five to seven short questions covering whole of the syllabus. The student has to answer five questions in all by selecting one question from each unit.

Unit – I: Introduction
Computers as physical systems, technological issues, Introduction to Turing machines-classical probabilistic and deterministic Turing machines, Quantum Turing machines; introduction to computability, complexity, classical complexity and quantum complexity classes

Unit – II: Quantum Physics and Computers
Review of Quantum Mechanics- state vectors, superpositions, unitary operators, hermitian operators, Schrödinger equation, Hamiltonian evolution, the concept of quantum measurement, the concept of qubits, quantum registers and quantum gates

Unit – III: Quantum Algorithms
Introduction to quantum algorithms, Deutsch's algorithm, Shor's algorithm and Grover's search Algorithm, Physical implementation of simple quantum gates.

Unit – IV: Quantum Cryptography and Quantum Teleportation, real physical systems and technological feasibility
Heisenberg uncertainty principle, polarization states of photons, quantum cryptography using polarized photons, entanglements, introduction to the EPR paradox, BELL's theorem, Bell basis, teleportation of a single qubit, review of some current experiments and candidate physical systems, technological feasibility of a quantum computer and the limitations imposed by noise.

PHOTONICS

Course Code: MTEP- 309 **Max. Marks : 80**
Periods/ week: 3
Time: 3 hours

Note: The examiner will set nine questions in all by selecting one question from each unit. Question No. I will be compulsory and will have five to seven short questions covering whole of the syllabus. The student has to answer five questions in all by selecting one question from each unit.

Unit - I

Review of wave nature and particle nature of light, Light sources-black body radiation, Interaction of light with matter-Emission and absorption of radiation, Laser Fundamentals: Stimulated and spontaneous Emission, Einstein relations, Optical feedback, threshold condition, lineshape function, Laser Modes, classification of laser, Requirement of Sources for Optical Fiber Communication, Injection Laser Diode (ILD) and Light emitting Diode (LED), Optical Power Launching and coupling from LED/ILD to optical fiber, Single mode operation, mode locking and Q switching of laser, LED and ILD drive circuitry. Elementry ideas of Display devices – Plasma, Liquid Crystal and Numeric Displays.

Unit - II

Optical fiber Communication and its advantages, Classification of optical fibers, Numerical aperture, light ray propagation through step index and graded index fiber, Timer dispersion, Light wave propagation through optical fibers, Eigen-value equation and its solution, Pulse Broadening, Material and Waveguide Dispersion. Signal Attenuation, Splice and connector loss.

Unit - III

Photodetection, PIN and Avalanche Photo diode (APD), Quantum Efficiency, Responsivity and Speed of Response Noise mechanism in photo detectors, Photomultipliers, Photon Counting techniques.

Unit - IV

Components of Optical Fiber Communication Systems, Modulation Scheme, System design consideration, Optical power budget, Rise time budget. Over view of recent developments in optical fiber communication with special reference to Erbium Doped Fiber Amplifier (EDFA), coherent optical communication, Wavelength Division Multiplexing (WDM) and Dense WDM (DWDM) based optical fiber communication. Introduction to Non linear fiber optics and Solutions. Elementary ideas of Optical Fiber Sensors and applications of specialty optical fibers.

4. The hand book of Photonics: Gupta and Ballato-CRC Press(2006).

ION BEAM TECHNOLOGY

Course Code: MTEP – 310 **Max. Marks : 80**
Periods/ week: 3
Time: 3 hours

Note: The examiner will set nine questions in all by selecting one question from each unit. Question No. I will be compulsory and will have five to seven short questions covering whole of the syllabus. The student has to answer five questions in all by selecting one question from each unit.

Unit - I

Vacuum : Elements of a Vacuum system, molecular & viscous flow & conductance pumping speed, Displacement & containment pumps, design of ultra vacuum system , vacuum measurement gauges, Leak detection techniques.

Beam Optics & Beam Transport: Motion of charged particles in electric and magnetic fields , Phase space (both transverse and longitudinal) and Liouville's theorem , Focusing devices :Einzel lens, solenoid, quadruple, magnetic and electric sector fields; Matrix method Aberrations, Design of a beam line for beam transport & computer simulations.

Unit - II

Ion source: Production of charged particles Space charge limitation, Extraction & Focusing geometries, Positive and negative ion sources, Radio frequency ion sources, Duoplasmatron, Penning ionization source, sputter ion source, ECR source –room temperature & super conducting.

Accelerators: Electrostatic accelerators – Cockroft- Walton, Van – de – Graf , Pelletron, Pulsed accelerator – Cyclotron, Synchrotron, Radio frequency linear accelerators – LINAC, Storage rings – future trends.

Unit - III

Cryogenic: Introduction to cryogenics and its application to accelerator , Achieving low temperature, Various Thermodynamic Cycles, Heat transfer at low temperature : Conduction , Convection , Radiation process ,Insulation , LN2/He storage vessels , Cryostat Design , Properties of materials at low temperature , Heat load calculation , Superconducting magnet / cavity for accelerator, superconducting magnet vs conventional magnet, Cryogenic instrumentation- Temperature sensor, Liquid Helium, Nitrogen level, Flow sensors.

Unit IV

Applications of accelerator: Trace element analysis , Various methods , RBSmeasurements of elemental ratios & concentrations , channeling RBS , ERDA – depth resolution & sensitivity , high resolution& sensitivity , high resolution sub monolayer thickness studies, Nuclear reaction analysis (NRA), Particle induced X – ray emission (PIXE) studies, Accelerator mass spectrometry (AMS), Medical applications of accelerators.

COMPUTER NETWORKS

Course Code: MTEP – 318 **Max. Marks : 80**
Periods/ week: 3
Time: 3 hours

Note: The examiner will set nine questions in all by selecting one question from each unit. Question No. I will be compulsory and will have five to seven short questions covering whole of the syllabus. The student has to answer five questions in all by selecting one question from each unit.

UNIT – I

Introduction and The Physical Layer: Uses of Computer Networks, Network Hardware, Network Software, Reference Model (OSI, TCP/IP Overview), Topology , Types of Networks , Theoretical Basis for Data Communication, Guided Transmission Media, Unguided Transmission Media : Wireless Transmission, Communication Satellites.

[No. of Hrs.: 10]

UNIT – II

Digital Signal Encoding Formats – NRZ-L, NRZI, Bipolar-AMI, Manchester, Differential Manchester, Digital Modulation – ASK, FSK, PSK, QPSK, Digitization – Sampling Theorem, PCM, DM, Analog Modulation – Introducing AM, FM, PM.

[No. of Hrs.: 10]

UNIT – III

The Data Link Layer: Ethernet Frame Format , Flow Control Protocols, Stop-and-wait Flow Control, Sliding – Window Flow Control, Error Control, Stop-and-wait ARQ, Goback- N, Selective-repeat. The Network Layer: IPv4 Addressing Mechanism , Routers , Introduction to Routing Protocols.

[No. of Hrs.: 10]

UNIT – IV

The Transport Layer : Connection Oriented and Connection less Service Protocols : UDP, TCP. Application Layer: DNS, E-Mail, SMTP , MIME.
Network Security: Firewalls (Application and packet filtering), Cryptography : Public and Private Key Cryptography.

[No. of Hrs.: 10]

COMPUTER NETWORKS LAB

Course Code: MTEP – 319 **Max. Marks : 100**
Periods/ week: 4
Time: 4 hours

1. Perform and Simulate the experiment of PAM using the PAM Kit.

2. Perform and Simulate the experiment of PPM using the PPM Kit

3. Perform and Simulate the experiment of CSMA Protocol with LAN Trainer Kit with Bus Toplogy

4. Perform and Simulate the experiment of CSMA/CD Protocol with LAN Trainer Kit with Bus Toplogy

5. Perform and Simulate the experiment of CSMA Protocol with LAN Trainer Kit with Star Toplogy

6. Perform and Simulate the experiment of CSMA/CD Protocol with LAN Trainer Kit with Star Toplogy

7. Write a Program to implement Connection Oriented Client Server communication (Socket Programming) using TCP Protocol
8. Write a Program to implement UDP oriented Client Server communication (Socket Programming)

Note: List of experiments will be regularly upgraded.
